## **Section 1 – Conflict Minerals Disclosure**

### **ITEM 1.01 Conflict Minerals Disclosure and Report**

The following should be read in conjunction with the definitions contained in the Securities and Exchange Commission (“SEC”) instructions to Form SD and related rules.

With respect to conflict minerals necessary to the functionality or production of products manufactured by AU Optronics Corp. (“we,” “us” or “our”), or contracted by us to be manufactured, and required to be reported on Form SD for 2018 (collectively, “CMs”), we conducted in good faith a country of origin inquiry that we believe was reasonably designed to determine whether any of the CMs originated in the Democratic Republic of the Congo or an adjoining country (“Covered Countries”). For a description of our country of origin inquiry, please see the discussion in Exhibit 1.02 of the measures we took to exercise due diligence (of which such inquiry was a part), which discussion is incorporated herein by reference.

To the extent we know or have reason to believe that the CMs originated, or may have originated, in the Covered Countries and may not have been from recycled or scrap sources, we exercised due diligence on the source and chain of custody of the CMs as required by the SEC rules. For further information, please refer to Exhibit 1.02.

The disclosures contained in this Form SD are available on our website, [https://auo.com/zh-TW/Stock\\_Services/index/Material\\_Information\\_and\\_Announcement\\_1](https://auo.com/zh-TW/Stock_Services/index/Material_Information_and_Announcement_1). The website and the information accessible through it are not incorporated into this specialized disclosure report.

### **ITEM 1.02 Exhibit**

The registrant’s Conflict Minerals Report required by Item 1.01 is attached hereto as Exhibit 1.02.

### **ITEM 2.01 Exhibits**

Exhibit 1.02 - Conflict Minerals Report as required by Items 1.01 and 1.02 of this Form.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the Registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.

AU OPTRONICS CORP.

By: /s/ Shuang-Lang (Paul) Peng

Name: Shuang-Lang (Paul) Peng

Title: Chairman and Chief Executive Officer

Date: May 31, 2019

Conflict Minerals Report of AU Optronics Corp.  
for the Year Ended December 31, 2018

## Introduction

The scope of this report covers major products of AU Optronics Corp. (“AUO”) and its other group companies from January 1, 2018 to December 31, 2018. The following list sets forth the major products of AUO and its other group companies:

- AUO: TFT-LCD panels and solar modules;
- Darwin Precisions Corporation: TFT-LCD modules, TV set, backlight modules and related parts;
- AUO Crystal Corp.: Ingots and solar wafers;
- M.Setek: Ingots.

According to relevant rules and regulations of the SEC, AUO is required to conduct due diligence to inquire whether the following four minerals, gold, tin, tantalum and tungsten (the “3TG Minerals”), used as manufacturing components or functional additives, are not from the Democratic Republic of the Congo or other illegal neighboring areas, thereby not benefiting, directly or indirectly, the local armed groups in such areas.

## AUO GP Policy

- In 2011, AUO published the Policy for No Use of Conflict Minerals on its public website ([https://auo.com/upload/media/auo/Policy\\_and\\_Document/Conflict\\_mineral\\_statement\\_tc\\_en\\_sc.pdf](https://auo.com/upload/media/auo/Policy_and_Document/Conflict_mineral_statement_tc_en_sc.pdf)), and communicated such conflict mineral policy and requirements to suppliers through written documents and supplier meetings. The policy contains the following principles:
  1. AUO has reiterated that AUO and its suppliers shall jointly assume social and environmental responsibility.
  2. AUO shall not accept any 3TG Minerals illegally exploited from the Democratic Republic of the Congo and neighboring conflict-affected areas.
  3. AUO shall inform and require its suppliers to follow the abovementioned statements.
- AUO has required its suppliers to establish management and documentation procedures for conflict minerals, disclose if the supplied 3TG Minerals used for products are conflict minerals and engage RBA RMAP certified smelters.
- AUO has required its group companies to establish management and documentation procedures for conflict minerals, and implement such procedures in the management of their supply-chains.
- Group companies shall provide summaries of measures taken each year and results of relevant investigations to AUO, as reference for AUO’s conflict minerals report.

## Due Diligence Measure Performed

AUO has complied with the supply-chain policy concerning conflict minerals issued by OECD and established relevant management procedures and documentation requirements, in order to make sure AUO’s products are in accordance with relevant regulations of conflict minerals and requirements from clients. The following sets forth the relevant highlights of the measures we have taken and the conclusion of our inquiry.

### OECD Step 1: Establish Strong Company Management System

AUO has established a complete system for management of conflict minerals in five steps, including management for test of conflict minerals, management of materials, management of supply chain, trainings and results of management.

#### Management for Test of Conflict Minerals

- AUO’s test of conflict minerals includes identification of risks in materials and STG investigation of minerals. All the products sold by AUO officially are required to be tested.
- Relevant information concerning 3TG Minerals are provided by suppliers, including the name and location of smelters, origin of minerals and etc. Relevant information provided by suppliers will be reviewed by employees of AUO and saved together with records of such review in an electronic system named GPARS.

### Management of Materials

- AUO has applied intelligent management for the information dissemination concerning management of materials. AUO's e-system can automatically consolidate all the lists of acquired materials and periodically produce reports about the completion rate concerning test of conflict materials and circulate them to relevant departments.
- The relevant departments then review the test progress of conflict minerals through periodic internal meetings, and implement relevant improving measures to make sure products are in accordance with regulations and requirements from clients.

### Management of Supply Chain

- AUO inspected suppliers' management measures concerning conflict minerals to see whether suppliers had performed their duties and met AUO's requirements.
- Inspection activities includes inspection of new suppliers and annual inspection, which all involve the inspection of conflict minerals.

### Trainings

- AUO has distributed internally electronic newsletters to employees that explain regulations concerning conflict minerals and AUO's compliance measures. For relevant departments highly involved with management of conflict minerals, AUO has conducted multiple trainings to explain the regulations and AUO's compliance measures concerning conflict minerals and to introduce responsible departments and relevant system tools. The targeted audience includes departments in charge of procurement, management of suppliers and management of green products.

### Results of Management

- AUO produces two kinds of reports concerning the management of conflict minerals:
  1. The Form SD filed to SEC every year, including the report for conflict minerals and discloses the process and result of investigation of conflict minerals;
  2. Results of investigations of conflict minerals required by clients.

## **OECD Step 2: Identify and Assess Risk in the Supply Chain**

### Identification of Material Risks and Investigation of 3TG Minerals

- AUO reviewed the materials procured from January 1, 2018 to December 31, 2018 and based on type and usage, these materials fell into the following three categories:

Category one: materials containing metal and used as manufacturing components or functional additives;

Category two: materials containing metal and were not used as manufacturing components or functional additives;

Category three: materials not containing metal.

Categories two and three are considered to contain minimal risk and therefore not covered by the scope of the investigation. Category one is a high risk category and AUO needs to examine the supply chains of the materials in category one and confirm if the 3TG Minerals are not from the Democratic Republic of the Congo or other illegal neighboring areas.

- In 2018, AUO examined more than 97 suppliers and conducted investigations over more than 4,158 part numbers of materials.

### Inspection of Suppliers' Management Measures concerning Conflict Minerals

- As of December 31, 2018, AUO has conducted 55 inspections on 51 suppliers.

### **OECD Step 3: Design and Implement a Strategy to Respond to Identified Risks and Implement of Control Points**

- AUO will continue to implement the following due diligence procedures:
  1. Continue to require suppliers to establish management and documentation procedures for conflict minerals and disclose if the 3TG Minerals supplied are conflict minerals;
  2. Continue to require the group companies to improve their management and documentation procedures for conflict minerals, and implement such procedures in the management of their supply-chains;
  3. Continue to conduct internal and external trainings and make sure all relevant personnel have relevant knowledge;
  4. Continue to require suppliers to engage RBA RMAP certified smelters. If the smelters engaged are not certified, AUO shall ask suppliers to require smelters to certify, or change smelters;
  5. Continue to conduct inspections of suppliers' management measures concerning conflict minerals, and assist suppliers through such inspections in meeting AUO's requirements.

(Note: EICC CFSP is revised as Responsible Business Alliance (RBA) Responsible Minerals Assurance Process (RMAP))

### **OECD Step 4: Carry Out Independent Third-Party Audit of Supply Chain**

- AUO hasn't officially launched the inspection process of conflict minerals by third party audit. However, AUO has gone through various conflict mineral inspections by its clients and passed all of them. Moreover, AUO's annual report of corporate social responsibility also discloses its policy and measures concerning conflict minerals. Such report is assured by independent auditors before issuance and successfully passed the audits.
- In addition to the inspection process by our client, AUO also provides conflict mineral documents requested by its client and disclose results of the inspection therein. In 2018, AUO provided a total number of 357 conflict mineral documents to its clients.

### **OECD Step 5: Report Annually on Supply Chain Due Diligence**

- By conducting the aforementioned due diligence procedures, AUO completed identification of risks concerning materials and investigation of 3TG minerals for all the materials used for the manufacturing of all the products from January 1, 2018 to December 31, 2018;
- In 2018, AUO identified 247 smelters as RBA RMAP certified smelters. Please refer to Schedule I for list of smelters.
